

ABB has teamed up with Indore Smart City Development Limited (ISCDL) to deploy next-generation digital technology that ensures that residences and businesses have access to electricity at all times.

During the initial phase of the collaboration, this technology enabled over 2300 connections to have continuous power with an efficient automatic response system (ARS) in the event of power outages or disruptions.

ABB and ISCDL now intend to replicate the approach in other parts of the city, positioning Indore as a model for smart city projects throughout India.
