

RajatSeksaria, CEO of ACME Group, stated that the company intends to have two to three green hydrogen projects under construction by the end of March next year.

It is currently in the process of acquiring land in Tamil Nadu and will do so in Odisha very soon.

People have realised that energy transition cant be achieved solely on the basis of electrons or renewable power, and we need to move into the energy space as well because oil and gas, and other hydrocarbons are the major reasons for carbon emissions, he said.

He further said, " Prime Minister Modi called for the Mission in August 2021 and now it is 2023 that they come out with the actual allocation of funds. So, one way to look at it is how hydrogen is to be evolved as a sector with all the global interplay. So, the approach the government has taken is very consultative. The government has done many rounds of consultation at various ministry levels, with individual players or with associations."
