

ACME Solar announced that a 300 megawatt (MW) solar power project for MSEDCL had been successfully commissioned.

The electricity generated by this plant will be distributed throughout Maharashtra, and the facility would be able to power over six lakh houses.

According to ACME Solar Chief Operating Officer Sandeep Kashyap, this is the company's largest single-location project to date.

"We faced two consecutive rounds of the Covid-19 pandemic that brought working at the sites to a standstill. It was burdened with disruption in the supply chain and sky-rocketing prices of solar modules and other equipment. Prices of nearly all components peaked and freight increased many folds. We could overcome all the challenges with the support of our management, excellent coordination and diligent teamwork, and commissioned the project successfully in the shortest available time," he added.
