

The new facility is equipped with state-of-the-art machinery and equipment, enabling it to produce high-quality ERW pipes that meet international standards. The plant is expected to create numerous employment opportunities in the region and will contribute to the local economy.

The ERW API grade line pipes manufactured by the plant are specially designed for oil and gas pipelines, and are suitable for use in harsh and corrosive environments. With this launch, the pipeline industry can look forward to a reliable source of high-quality pipes, which can withstand the demands of the industry.

This new facility has been launched with the vision to support the government’s ‘Make in India’ initiative and to encourage self-sufficiency in the manufacturing sector. The launch of this new plant is expected to strengthen the country’s position as a leading exporter of steel pipes, and contribute to the growth of the economy.

The launch of the new plant has been well received by industry experts and analysts, who have praised the investment in new technology and infrastructure. The new plant is expected to become a key player in the pipeline industry, catering to both domestic and international markets.

The launch of the new plant marks a significant milestone for the manufacturing industry in Anjar, and is expected to have a positive impact on the region’s economy. This is a great step towards achieving the goal of making India a self-reliant nation in the field of manufacturing.
