

**Arkema** announces the doubling of its polyester resins capacity in its Navi Mumbai facility in India, reinforcing the Group's leadership position in the global powder coatings market and its commitment to developing very low-VOC technologies.

Arkema invested in the Navi Mumbai facility in early 2019 to expand geographic coverage of its high performance, more sustainable, low-VOC products, and to support its customers in their development.

The site includes a modern manufacturing unit and a dedicated laboratory to provide application development and technical support in the region.

"India is a key growth market for both the powder coatings industry and for Arkema," said Neil Tariq, Global Business Director for Coating Resins.

"Arkema is the first international leader in powder coating resins to make significant investments in the area. Powder coating resins enable low waste, solvent-free and high durability solutions, which make this technology key to the sustainable development of our customers and partners," Neil added.
