

Berry Global Group, Inc., a leader in the design, development, and production of patient-centered healthcare solutions, will begin product production in April 2023 at its second manufacturing facility and healthcare centre of excellence in Bengaluru.

The new greenfield expansion project will improve access to advanced healthcare solutions on a regional and global scale. It will provide customers with the volume required to support the anticipated growth in Asia's domestic healthcare market.

According to the company, it will also boost India's domestic economy by hiring more than 500 new team members in Bengaluru over the next eight years.

"Healthcare companies have limited access to regional expertise and global capabilities needed to provide patient populations in Asia with modern healthcare solutions at scale," said Tom Salmon, Berry Global's chairman and CEO.

"Our new facility and global healthcare centre of excellence in Bengaluru will support Asia's growing demand for healthcare products, create new jobs, and, most importantly, benefit the lives of patient populations who have historically gone untreated and underdiagnosed," he added.
