

Berry, a global leader in the design, development, and manufacturing of patient-centered healthcare solutions, plans to start production at its new manufacturing facility and healthcare centre of excellence in Bangalore, India, as early as April 2023.

The Greenfield expansion project will generate local employment while also improving global access to health products.

This new Greenfield expansion project will improve regional and global access to advanced healthcare solutions, provide customers with the necessary volume to support Asia's domestic healthcare market's forecasted growth, and boost India's domestic economy by employing more than 500 new team members over the next eight years in Bangalore, commonly referred to as India's Silicon Valley, the co-founder said.

The new Bangalore plant will improve global patient access to products for the inhalation, nasal, ophthalmic, dispensing, and self-injection industries.
