

[Ctrl S Datacenters](#), a leading provider of data center solutions, has announced plans to build a new high-rise commercial data center in Ambattur Taluk, Chennai, Tamil Nadu. The proposed project will involve the construction of a commercial data center building that will consist of a ground floor and 14 additional floors, along with two HSD pump rooms located on the ground level. The total area of the project will span across 67758.75 square meters. As of March 2023, the company has received approval from the state pollution control authorities to establish the project. This means that the company has met all the necessary environmental standards and regulations required for the construction of the data center. The new data center is expected to cater to the growing demand for data storage and processing capabilities in the region. With its state-of-the-art facilities and cutting-edge technology, the data center is expected to attract a range of businesses and organizations in various sectors, including IT, healthcare, finance, and more.
