

The development of a new data centre in Chennai, India, has been announced by the Indian web hosting business Cyfuture.

The facility, which will be Cyfuture's fifth data centre in India, will be situated in Tembaran, Chennai, on an approximately one-acre property, and its initial capacity will be 500 racks. Data storage, cloud computing, and disaster recovery are just a few of the cloud services that the Chennai data centre will provide. The start of the building had not yet been given a set date.

"We are thrilled to bring our state-of-the-art data center infrastructure to Chennai," said Cyfuture CEO and founder Anuj Bairathi. "This new facility will enable us to meet the increasing demand for cloud services in the region and help our clients drive innovation and growth through the power of the cloud."
