

A new facility for the production of specialised polymers has been established at Gazipur by Dysin Group, one of the innovators in introducing new technologies for the knit-dyeing, garment washing, and garment printing industries.

The company makes ongoing investments to increase its capacity for producing textile accessories. The new facility has officially opened.

“We have been working in the textile industry since 1984, providing dyestuff and chemicals with technical services. Now Dysin is recognised as a trusted leader in delivering innovative and sustainable chemical solutions across multiple industries. The setup of a specialty polymer manufacturing plant is an important part of our vision to grow in local manufacturing capability. This plant will serve to produce the intermediate chemicals used as raw materials in our textile auxiliaries manufacturing, in turn reducing the cost,” managing director of [Dysin Group](#), AmanurRahman said.

“Our first manufacturing unit for textile auxiliaries was established in 1990. Now Dysin has three chemical manufacturing units under two companies, including a 100 per cent export-oriented unit that serves the export factories having a bond license.”
