

Gautam Solar recently increased its production capacity by tenfold, from 50 metric tonnes per month to 500 metric tonnes per month, at its Solar Module Mounting Structures manufacturing unit.

The state-of-the-art facility, which will be based in Haridwar, will manufacture SMM (Solar Module Mounting) structures for solar pumps, solar power plants (Utility Scale & Rooftops), solar street lights, and high masts.

Gautam Solar will be able to meet the government of India's ambitious renewable energy ambitions thanks to the growth of the unit. The constructions have been built to endure wind speeds of up to 150 km/h, ensuring their durability and longevity.

The items were created by a team of skilled structural engineers and have been approved by reputable structural engineering institutes.
