

JSW Energy announced a contract with GE Renewable Energy for the delivery of 810 MW of onshore wind turbines for the company's pipeline of roughly 2.5 GW of renewable projects in India, which is currently under development.

The turbines will be delivered in the second quarter of CY2022. These turbines will generate enough green energy to power more than 2.1 million homes in the country for a whole year. "We are proud to partner with GE, a high-tech industrial company, to contribute to India's renewable energy goals. Our company has set a target to reach 20 GW of power generation capacity by 2030, by when the share of renewables in our entire portfolio will become 85%," JSW energy CEO and joint managing director Prashant Jain said.
