

In the next three years, BOLT, an EV infrastructure provider, and Park+, a prominent parking aggregator, will work together to install 45,000 EV charging points across India, including in housing societies, corporate offices, tech parks, and public spaces.

According to a joint release, the BOLT-Park+ alliance will give EV customers access to charging infrastructure at different touchpoints and address all EV demands through a single app.

Commercial enterprises, residential units, tech parks, and public parking spaces would benefit from the cooperation by being able to provide a cheap EV charging solution on their premises. Over the next five years, BOLT expects to provide its EV charging infrastructure to more than a million Park+ users in 20 Indian cities through this agreement.
