

RAPID CONSTRUCTION · EXCEEDING EXPECTATIONS

Epack Prefab, a leading manufacturer of prefabricated buildings, announced its plans to set up a new greenfield manufacturing unit in Andhra Pradesh's Tirupati district. The unit will be spread over 10 acres and will have a production capacity of 60,000 square meters per annum. The company aims to cater to the growing demand for prefab structures in the region.

The new manufacturing unit will be equipped with the latest technology and machinery to produce high-quality prefabricated buildings, including industrial sheds, warehouses, and commercial buildings. Epack Prefab plans to invest INR 60 crores in the new facility, which will generate employment opportunities for the local community.

The company's decision to set up a greenfield facility in Andhra Pradesh is in line with the state government's efforts to promote industrial growth and attract investment. The state offers several incentives to businesses that set up operations in the region, including tax exemptions and subsidies.

Epack Prefab is confident that the new manufacturing unit will help the company expand its footprint in the region and provide customers with cost-effective and energy-efficient solutions. The company's focus on sustainability and eco-friendliness is expected to further boost its growth prospects.
