

With an investment of Rs. 30 crore, Sri BioAesthetics established an integrated agri-biotech hub in Sultanpur, on the outskirts of Hyderabad.

Later this week, the facility—exclusively intended for microbial technology for agriculture—will be officially opened.

According to a press release from KRK Reddy, managing director of Sri BioAesthetics, the facility will perform basic and applied research as well as provide the farming community with high-quality biological agri inputs and testing services.

In order to interact, share ideas, and develop answers, the centre will bring together scientists, researchers, and specialists from many sectors, he noted.

The Hyderabad-based business is also introducing MyAgriBiome, an online platform for farmers to analyse and monitor soil life.
