

Tata Projects has commenced construction work of Noida International Airport at Jewar in Uttar Pradesh.

The work started with the celebration of the groundbreaking ceremony at the site.

NIA passenger terminal has an efficient layout, convincing design language, multiple high-quality areas spaced out with lush greenery and a balanced concept for both energy savings and a tangible sense of sustainability. The design complements customer comfort with sustainability and timeless design with flexibility for future needs.

At Noida International Airport, the contract involves the construction of a runway, terminals, roadways, utilities, airside infrastructure, and other auxiliary facilities.

Under the quality and cost-based selection criteria used for the selection process, the Tata group's infrastructure and construction arm outperformed its competitors Larsen & Toubro (L&T) and Shapoorji Pallonji.
