

Tata Power Renewable Energy Limited (TPREL) is a leading Indian energy company that plans to set up a new solar power project in Solapur, Maharashtra. The project will involve the installation of a 200 MW solar power plant, which has been awarded to TPREL through a competitive bidding process followed by a reverse e-auction. As of March 2023, TPREL has received a letter of award from the Maharashtra State Electricity Distribution Company Limited (MSEDCL). The project is expected to be commissioned within 18 months from the execution date of the Power Purchase Agreement (PPA). The installation of this solar power plant is a significant step towards reducing carbon emissions, as it is estimated to reduce around 432.94 million kg of CO2 emissions annually. It is expected to be one of the most substantial solar PV projects in India and will contribute to the country's goal of increasing renewable energy capacity to 450 GW by 2030. Overall, the new solar power project in Solapur, Maharashtra, is a significant development for TPREL and the Indian renewable energy sector, providing clean and sustainable energy to the people and contributing to the country's sustainable development goals.
